GIZMO HOLSTER

Leather Belt Mount for GIZMO Resistor Units

HLS-GIZ-GB1/2

Introduction

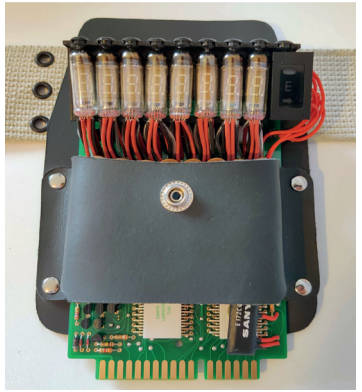

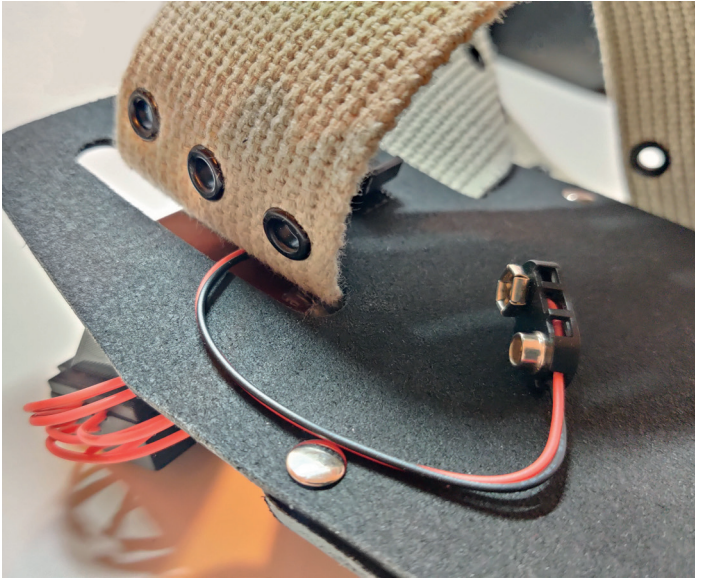

Thank you for purchasing an EctoLabs GIZMO HOLSTER. Each holster is hand-crafted from premium veg & pit tanned leather, and set with silver coated brass rivets and snaps. They have been specifically designed to fit the EctoLabs GIZMO kits perfectly, but are compatible with any other gizmo motherboards with a maximum width of 10cm (3.9").

The "GB1" style holster can accommodate 55mm pistol belts, while the "GB2" version is compatible with standard 55mm pistol belts, 2¼" webbing belts and any custom belt with a width of up to 3".

Mounting your GIZMO unit

It is recommended to add some thick protective tape (such as gaffer or Gorilla tape) to the back of your GIZMO unit before mounting. Be sure to cover any sharp solder points on the reverse of the circuit board which may otherwise permanently damage the leather.

When sliding your GIZMO into the holster, the battery connector cable can be fed through one of the belt slots for a clean look and easy access to the battery terminals. If you need to prevent the GIZMO from moving, use some of the included Velcro strip between the back of the unit and the flat area of the holster behind the band.

EctoLabs is an unofficial maker of replica Ghostbusters props and costume accessories. Product names and suggested functionality are works of fiction. "Ghostbusters" is a registered trademark of Columbia Pictures Industries Inc.
