## Proton Pack Label Set

### Installation Guide

PACK v1.0 - March 2024

# INTRODUCTION

Thank you for purchasing the **EctoLabs Proton Pack Label Set** – a complete pack of professionally printed full-scale vinyl, metallic and aluminium plate labels for your Proton Pack and Neutrona Wand!

Each label has been recreated using high-resolution graphics - the typefaces have been digitally matched to those used on the original vintage stickers, graphical elements hand-traced, plus the sizing and shape of each one has been meticulously replicated using detailed reference photos of screen used props.

Our vinyl labels are printed on premium polypropylene film with permanent adhesive. Glossy variations feature a UV resistant laminate that protects from weather and sunlight. Matte metallics are treated with an anti-glare smooth laminate that replicates the look of soft metal. Note that this matte laminate is not UV resistant. Our new metal plate labels are mounted on 1mm thick aluminium plates and include a strong 3M adhesive backing

## LABEL INSTALLATION

Our labels have been precision 'kiss cut' by our own specifications, so installation is simply a matter of peeling from the paper packing and carefully sticking on your prop in the required position.

If you wish to increase the reflectivity of the Metallic Vinyl, we recommend spraying a coat or two of Matte or Satin Clear Lacquer directly onto the surface of the label. Make sure you allow the lacquer to fully dry before installation.

**Please note that all labels feature a strong permanent adhesive designed to stay put on your props. Be sure to refer to all sections of this guide to verify correct placement and take your time when installing.**

We have included a fully illustrated placement guide for every label included in this pack, alongside photographs of a number of screen-used Proton Packs. Be aware though that there were a number of variations of these props used in the original Ghostbusters movies, each with their own subtle differences. For more detailed reference photos, we highly recommend visiting the Ghostbusters Reference Library: <https://www.theghostbustersreferencelibrary.com>

## 'DANGER' LABEL KEY

As there are a number of very similar 'DANGER' labels included on the gloss vinyl sheet, please refer to the diagram below to make sure you have the correct one when attaching them to your pack. The numbers provided are referred to in the **LABEL PLACEMENT** section of this guide:

# LABEL PLACEMENT

**MOTOR-SYNCHRONOUS** DM  
CONTINUOUS DUTY      THERMAL PROTECTED  
1/35 H.P., 1 PH., 115 V.A.C., 50/60 HZ  
1500/1800 R.P.M.      .75/.65 AMPS  
CAP. 5 MFD 370 VAC  
INSULATION CLASS B  
PART NO. 252193

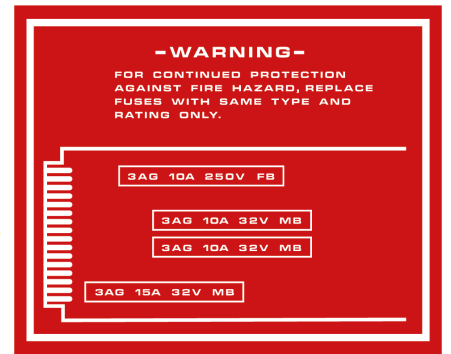

**WARNING**  
FOR-043 ANGLE GEARBOX ASSYS  
USE ONLY HYDRAULIC PUMPS  
THAT HAVE "O" RING TYPE  
GREASE RETENTION SPLINES  
(67WAF200 PUMP OR EQUIVALENT)

## LABEL REMOVAL

If you ever need to remove a label - do so with extreme care and take your time. Do not pull the label directly away from a painted surface, otherwise you may damage your paintwork.

Carefully lift one corner and slowly pull the label horizontally from one edge to meet the other, keeping the label as flat and close to the surface as possible. If any adhesive remains on your prop, moisten the residue with a small amount of water and rub off with a microfibre cloth. Do not use any alcohol-based cleaning products as this may damage the paintwork on your pack.
